

UNDERWRITING AMIDST THE PANDEMIC

Life's brighter under the sun

Balance

Business

Risk
Management

Business:

- Service Levels – resources
- Alternatives for Traditional requirements
- Alternative distribution channels/ processes – remote selling/submission

Alternatives for Traditional Requirements:

- Use of Annual Physical Exam (APE) or Executive Check-up (ECU) as alternative to regular medical exam until September 30, 2020 (*Circular No.: 0011NB07152020*)
- R.O.M.E. (*Circular No.: 016MS07222020*)

Alternatives for Traditional Requirements:

- Questionnaires instead of Medical Exam/APS
- Rely heavily on client/advisor's declarations

Proper Management:

- Anti-selective behavior
- Fraudulent claims

COVID-19

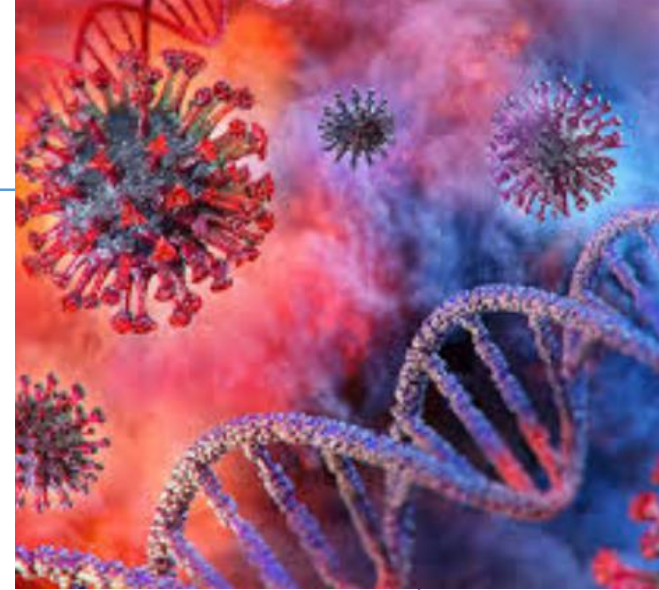

Life's brighter under the sun

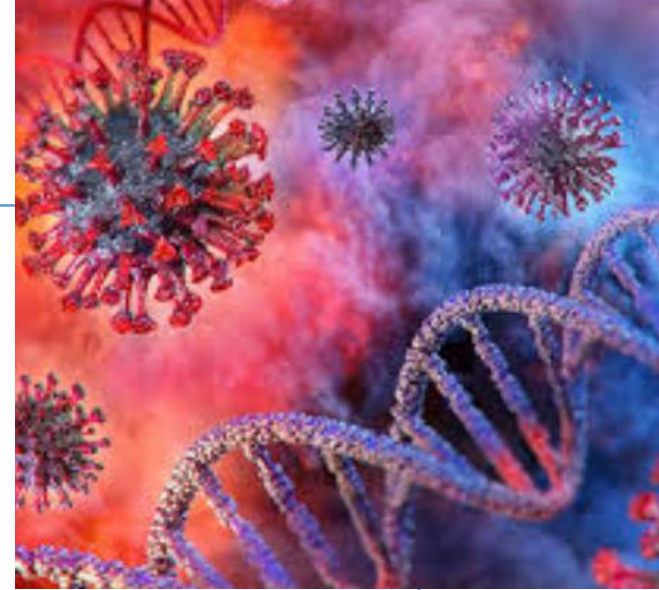

COVID-19 Claims Experience

- Claims Experience: As of Aug 12, 2020
 - 104 Death/GYRT
 - 47 Hospital Income Benefit
- Oldest policy: 1971
- Youngest policy: Mar 23, 2020 (Dec 2019 app)

3) Recovered

a) without hospitalization – fully recovered and with
NEGATIVE result

Life/CI – no waiting period, **STANDARD**

Sun Fit & Well – 1 to 3 months waiting period,
STANDARD

b) with hospitalization – fully recovered, w/ NEGATIVE
result

Life – 1 month waiting period, **STANDARD**

CI – 3 months waiting period, **STANDARD**

Sun Fit & Well – 1 to 3 months waiting period,
STANDARD

COVID-19 FAQ:

FAQs related to COVID-19

3. Is COVID-19 a critical illness?

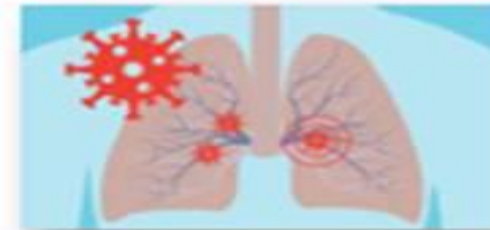

Ans: COVID-19 is not a specified Critical Illness (CI) in any Sun Life's products like CIB Rider, Sun Life Assure, SUN Fit and Well, and SUN Senior Care. While COVID-19 may lead to lung failure, this should not be mistaken for a CI known as End-Stage Lung Disease (ESLD).

End-Stage Lung Disease (ESLD), which is a covered illness under the products mentioned above, is a CHRONIC or LONG-TIME DEVELOPING condition from any of the underlying lung diseases. The lung disease is present long enough to damage lung parenchyma to the point of having LUNG TRANSPLANT as the ONLY form of treatment.

COVID-19, on the other hand, is caused by the virus SARS-CoV2 (also known as Severe ACUTE respiratory coronavirus), which may result to an acute respiratory failure. Acute conditions are **SEVERE AND SUDDEN** at the onset.

Note: All trademarks/copyrights are the property of their respective owners

4. Is COVID-19 a terminal illness?

Ans: COVID-19 is not defined as a terminal illness in any Sun Life's policies and early release of the death benefit is not applicable. Based from studies, most COVID-19 cases are mild and can fully recover from the disease. Mortality rate is at 4-9%* and the cause of death is generally due to a person's underlying medical conditions prior to COVID-19 exposure.

*Our World in Data mortality rate from February to May 2020.
