RGASeoul

Diabetes (DM):

Important considerations:

- Duration of the illness
- Control
- Complications/Co-morbidities

- Life:

Now: can accept younger than age 40 for type 1 & type 2

Before: accept age 40 & older

- Critical Illness/Senior Care:

Now: can accept age 30 & older for type 2

Before: accept age 40 & older

*** Type 1 – still declined

- Sun Fit and Well:

Type 2: can accept age 31 & older

*** Type 1 – still declined

*** Combination of DM & hypertension – declined

- Hospital Income Benefit:

Type 1 & 2: can accept age 41 & older

- Cancer Care

Type 1 & 2: can accept age 26 & older

Benign Breast Disorders: BIRADS 3

Important considerations:

- Family history
- Frequency of monitoring/observation period
- Personal history of breast cyst/tumors

• Life:

Now: can accept even if within 1 year of initial finding (rated)

Before: postpone within 1 year of initial finding

• Critical Illness/Senior Care:

Now: can accept even if within 1 year of initial finding (exclusion)

Before: postpone within 1 year of initial finding

• Sun Fit and Well:

6 months & less: postpone

> 6 months: with exclusion, if monitoring is still needed

• Hospital Income

Benefit/Cancer Care:

6 months & less: exclude

> 6 months: with exclusion, if monitoring is still needed

Gallbladder Polyp:

Important considerations:

- Size/type of polyp (> 1cm or 10mm)
- Age (> 50 at higher risk of developing cancer)
- Family history

- Life:

Now: > 5mm up to <10mm, can accept based on age/risk factors

Before: >5mm, postponed until cleared for malignancy

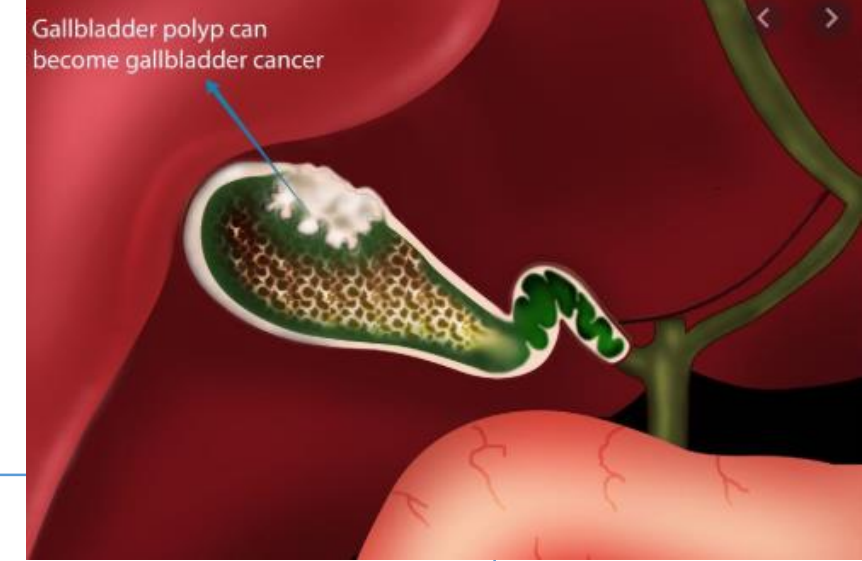

- Critical Illness/Senior Care: same as Life

- Sun Fit and Well:

Acceptance depends on symptoms, size, last episode (postpone within 1 year)

- Hospital Income Benefit:

Acceptance depends on symptoms, size, last episode (postpone within 6 months)

- Cancer Care

With full investigation, may accept with exclusion

Fatty Liver :

Important considerations:

- Alcohol consumption
- Other liver disease (hepatitis, cirrhosis, etc)
- Presence of liver biopsy

- Life:
Now: Alcohol consumption & grade of fatty liver are considered
Before: based on liver function test (LFT) results
- Critical Illness/Senior Care:
Now: Approach is similar to Life. If LFTs are normal, standard
Before: Even w/ normal LFTs, case is rated
- Sun Fit and Well:
Acceptance depends on age, other conditions. If LFTs are normal, standard
- Hospital Income Benefit:
Acceptance depends on age, other conditions & result of LFTs.
- Cancer Care
Similar to Sun Fit & Well.

Coronary Artery Disease:

Important considerations:

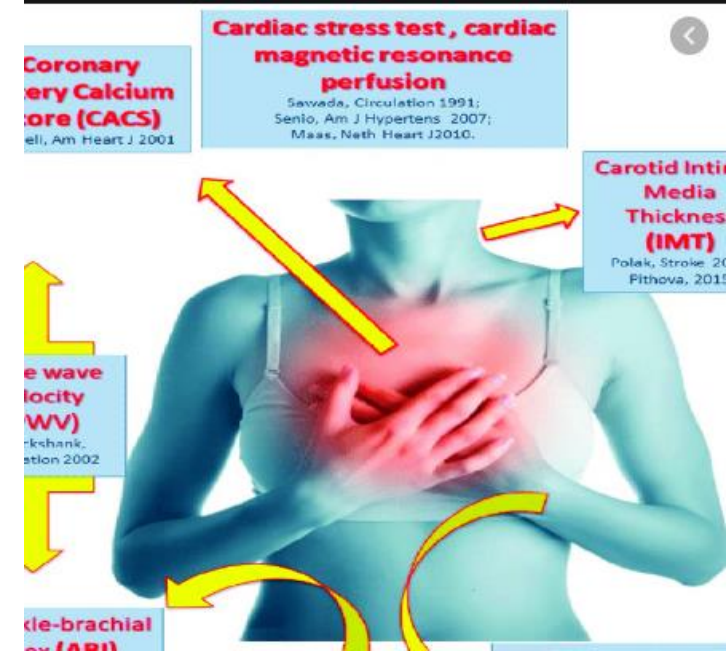

- Age (< 35 or 40 for severe type)
- Gender
- Extent of disease (number & type of vessels affected, etc)
- Ongoing CAD risk factors
- Presence of co-morbidities
- Quality of medical treatment/follow-up care

- Life:
Symptoms: within 6 months, postpone. After 6 months, assess under Coronary event.
Coronary event: within 3 months from treatment, postpone
after 3-6 months, acceptance starts at age 35 & based on favorable factors

- Critical Illness/Senior Care/Sun Fit and Well – decline all cases

- Hospital Income Benefit: decline all cases

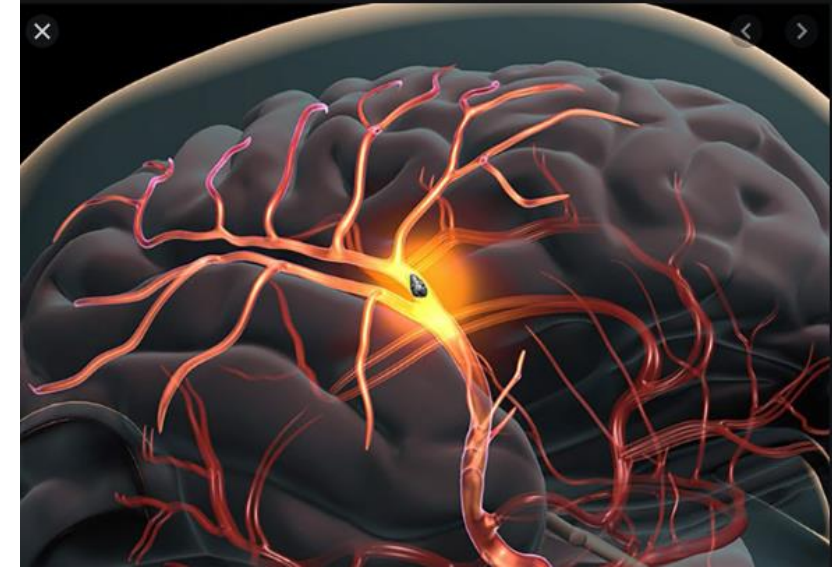

- Cancer Care
Depends on severity and age,
mostly declined within 2 years
from event

STROKE:

Important considerations:

- Age
- Type
- Number of episodes
- Presence of co-morbidities
- Quality of medical treatment/follow-up care

- Life:
Acceptance depends on age & time since attack – usually postponed within the 1st year
*** If still a smoker or has pre-diabetes or Diabetes – declined

- Critical Illness/Senior Care/Sun Fit and Well – decline all cases

- Hospital Income Benefit: usually decline, except for Stroke due to migraine or use of contraceptive pills (postpone w/in 1 year)

- Cancer Care - Same as Life
